

CBC VECOS®

The only single-use tourniquet
with defined compression force

+ Hygienic and safe

The CBC VECOS® single-use tourniquet guarantees maximum hygiene: No risk of cross-contamination with MRSA or other germs, no need for time-consuming cleaning or disinfection. Simply dispose of it and stay safe – ensuring absolute reliability in everyday medical practice.

+ Optimal Tourniquet Pressure (approx. 20 mmHg)

By stretching the elastic band apart, the optimal tourniquet pressure is reliably achieved. This defined pressure supports healthcare professionals during venipuncture and helps reduce the frequency of failed punctures, such as vessel ruptures.

+ Advantages

- + Comfort for medical professionals and patients:
 - Easy handling, even with gloves
 - Usable in dry, wet or cold environments
 - Micro velcro for easy closing and opening
 - Soft fleece – prevents pinching and skin constriction
 - Free from latex, silicone and plasticisers
- + Extremely lightweight (approx. 2.5 g/piece)
- + Cost-efficient and sustainable:
 - No reprocessing costs
 - Minimal material usage
- + Made in Germany – international patents
